

GO LumaLight

- 4 Mil Backlit
- Uses ElectiGlow Technology
- Flexible in Sized up to A1 Size
- Last for up to 7000 Hours

What is the GO LumaLight?

The new LumaLight is a flat super flexible display that provides the brightest and thinnest displays available for backlit displays. Using specialized phosphors that creates an electrochemical light source to produce light, the LumaLight is one of the most unique display options offered. At a mere 4 mm thick, the unit measures up to 36-inches making it the thinnest large format light display. The LumaLight can be mounted in many different ways in many different locations whether it be wrapped around a pillar, mounted on the wall or hanging from the ceiling. The light illumination from LumaLight is really amazing.

Remarkably bright whether during daytime or nighttime and with low power consumption, LumaLight can be used in unique areas such as elevators, restaurants, nightclubs, bars, promotional goods...the uses are unlimited. Combine the LumaLight with GO's Daytime/Nighttime film, and you have the full solution to meet your needs.

How easy it the LumaLight to use?

The LumaLight is extremely easy to operate. Just simply print your desired graphics, attach to the LumaLight and flip the power switch to "on". It is that easy to use. The LumaLight has two settings to attract customers to the graphics. The first is powered on with a constant glow which illuminates the graphics and draws customers to the graphics. The second option is to power the LumaLight to the flashing feature which throbs at a constant pace to highlight important images. Both options are available with an easy flip of a switch.

What sizes are available for the LumaLight?

GO now offers the LumaLight in three new sizes:

- 8" x 11.75"
- 11" x 16" and
- 23" x 33"
