Opportunities

Have you ever thought of or wanted to print your own unique designs or enter the sublimation market and start a potential business? If so, Good News! Graphics One is now offering the RIO Dye Sublimation Transfer Paper. With its unique anti-curling coating on its back, it is perfect for transferring images onto various sublimation surfaces. GO's RIO dye sub paper works exceptionally well with GO's RIO dye sublimation printer and highly compatible with RioColor dye sub inks. GO's RIO dye sub transfer paper is the best choice for any customer who wants to enter into the dye sublimation market.

GO RIO Dye Sub Transfer Paper

GO RIO Dye Sub Transfer paper offers a unique anti-curling back coating which makes the paper flat and straight for ease of use. GO RIO dye sub transfer paper offers 120 g/m² of paper weight and features a high transfer yield with high speed absorption and fast drying transfer efficiency on various heat-transfer presses. GO RIO transfer paper has been developed to meet the demands of the latest high speed printers. The paper has a specially formulated coating to ensure controlled release of the sublimed dye resulting in bright and vivid colors and rich, dense blacks. In Addition, GO's RIO dye sub transfer paper is equally suitable for hard and soft substrates.

Ideal Application

GO's RIO dye sub transfer paper can transfer onto various sublimation surfaces both open or close substrates such as polyester, t-shirts, cotton blend 50/50, mugs, metal plaques, coasters, aprons, lighters, bar runners and much more
