- Tanker System Constructed of Long Lasting Materials
- Each Tank Holds One Liter of Dye or Pigment Ink
- Communicator Chip Board Insert Handles Ink Delivery System

## Product Description

Looking for a way to save on ink costs? Graphics One has developed an industrial strength refill system that replenishes your current ink system without the high cost of replacing the old cartridges. Made of heavy duty materials, GO's Tanker is specifically developed for intense users who need a refill system that can work all day with low maintenance. Users will see a substantial increase in productivity using the Tanker in time alone. The Tanker is the highest quality, most extensive bulk refill system for the HP 5000/5500 available in the market today.

## Compatibility

This high quality non-evasive system easily attaches to the top of the printer with little effort. Included in the Tanker System is a sturdy six color tank system, one liter of ink per color (six colors), six funnels, six cartridges, including all docking hoses that easily attach to the cartridges and the chip board insert for communicating ink data to the HP 5000/5500. GO recommends using GO's high quality hInk, designed for the HP printers, for refilling the Tanker for an additional cost saving strategy.
