

GO eInk™

Inks for use with ENCAD Series Printers

- Manufactured to Exacting Specifications
- Custom Formulated
- Vivid, Long-Lasting Inks
- Use on Encad NovaJet II, III, 500, 600, 700, and 800 Series
- Excellent Viva-Chrome Color Characteristics
- GS/SWOP, Archival/UV and Pigmented

Graphics One (GO) eInk Family

Our eInk family of inks is comprehensive and includes full sets of C, M, Y, K, categorized into GS/SWOP, Archival/UV and Pigmented inks. Go eInks feature superior durability and outstanding quality and are compatible for use on ENCAD's NovaJet II, III, PROe, PRO and 500, 600, 700, and 800 series printers.

GO eInks are custom formulated and manufactured to our exacting specifications that meet or exceed the color gamut of the OEM inks that are shipped with your inkjet printer. Our Hyper-Particulate Saturation (HPS) technology assures that the dye-based and pigment particulates provide saturated coverage evenly dispersed throughout an image. Additionally, our Ultra-pure filtration to .22 microns means that the colors you get are pure and balanced from batch to batch.

Graphic Standard/SWOP Inks

GS/SWOP ink complies with the Specification for Web Offset Printing and is quickly becoming the standard for printing on large-format inkjets.

Archival/UV Inks

Archival/UV ink is durable and provides light stability and bright vivid colors

Pigmented Industrial Inks

Pigmented industrial ink is developed specifically for outdoor applications and features long lasting light fastness.

L2 (Long-Lasting) Refillable Cartridges

For added savings, GO offers refillable, long-lasting L2 cartridges for use with all ENCAD printers (Chip sold separately).
