

# Go glnk™ Quality Inks for Use with Grand Format Printers

- Developed Specifically for DGI, Idanit, Mutoh, Raster Graphics, Salsa, Scitex and Vutek Grand Format Printers
- Produced Using Organic, Non-Hazardous Materials
- Outstanding Lightfastness with Fade Resistant Pigments
- UltraGamut and UltraScreen Inksets

## Description - GO glnk (Grand Format)

Continuing its tradition of providing high quality inks for a wide range of large format printers, GO is now entering the superwide or grand format market with glnks. Developed specifically for grand format printers, these inks have been manufactured to meet the requests of our customers for a lower cost, high quality alternative to the OEM inks. Our Hyper-Particulate Saturation (HPS) technology guarantees saturated colors with the right UV screen for long term stability and UV durability. As with all GO inks, glnks are safe, non-hazardous and contain only organic materials for easy shipping and storage.

## UltraGamut and UltraScreen Inksets

GO offers two sets of glnk: UltraGamut and UltraScreen. The differences between the two inks are the UltraGamut has an extended color gamut and the UltraScreen has extended UV screening for better lightfastness. Our UltraGamut inks have a life of 12 to 18 months and our UltraScreen inks have a life of 24 to 36 months, depending upon the media being used. The ink sets come in Cyan, Magenta, Yellow, Black, Light Cyan, Light Magenta, Light Yellow and Light Black.

## Compatible Printers/Inks

The GO plnks are compatible with DGI Rex, Idanit, Mutoh Albatross, Raster Graphics Arizona, Salsa, Salsa II, Scitex GrandJet, Vutek 2360, 3300 and 5300 Grand Format printers.

## Ideal Applications

GO glnks are perfect for the major applications traditionally being recommended for the OEM grand format inks, such as billboards, building covers, point-of-purchase and vehicle graphics.
